# About this guide

## Introduction

This FM100 1D CCD Fixed Scan Engine Integration Guide provides general instructions for OEM integration.

## Graphic Notations

Tool – Handy item for a task.

Attention – Important subject to be aware of or to avoid.

Tips – Helpful information about a topic or a feature.

Example – Illustration of how to use a feature.

## About this guide

Newland Auto-ID Support Center

If you have a problem with your equipment, contact the Newland Support Center in your region. Before calling, have the model number, serial number, and several of your barcodes at hand.

Call the support Center from a phone near the scanning equipment so that the service person can try to talk you through your problem. If the equipment is found to be working properly and the problem is barcode readability, the Support Center will request samples of your bar codes for analysis at our plant.

If your problem cannot be solved over the phone, you may need to return your equipment for servicing. If that is necessary, you will be given specific directions.

Note: Newland Auto-ID Tech. is not responsible for any damages incurred during shipment.

For service information, warranty information or technical assistance contact or call the Support Center listed below. For the latest service information go to <http://www.nlscan.com/en>

# Getting to Start

---

## Introduction

FM100 is a 1D barcode reader. Newland Auto-ID patented **UIMG™** technology ensure FM100 fast image capture and accurate decoding. It provides the customer the best value.

This chapter presents an overall picture of how to use FM100 step by step. Please have an FM100 handy.

This chapter is recommended to general users, maintenance personnel, and software programmers.

# Getting to Start

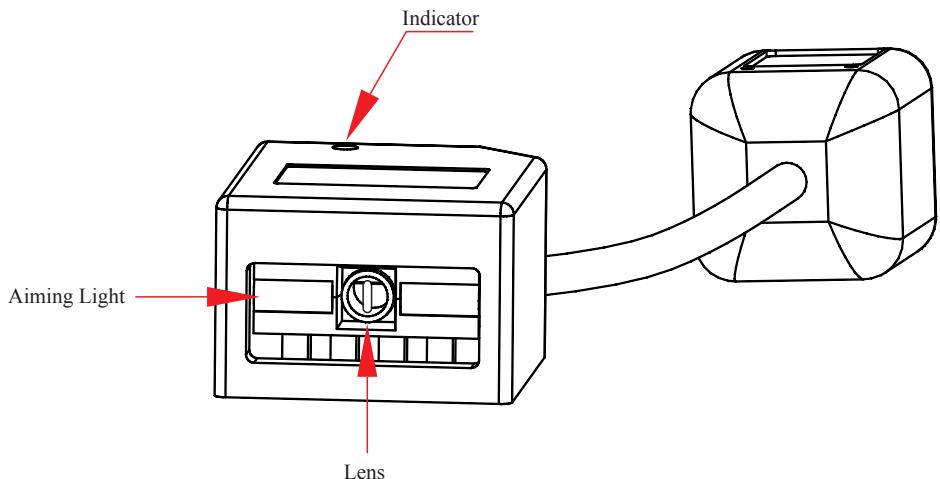

## Unpacking

### Unpacking

Unpack FM100 and accessories. Check with the packing list. Make sure that there is no damage or missing part(s). If any damage or missing parts, please keep the original package and contact your supplier for services.

### Outline of FM100

The figure below shows major components of FM100.

FM100 Outline

### Note:

- » The scan window must be kept clean. Improper maintenance will breach the limited warranty.
- » Avoid rough objects not to damage or scratch the window.
- » Use brush to remove the stain.
- » Use soft cloth (cloth for glasses) to clean.
- » Prohibit spraying towards the window.
- » Only use clean water as a cleanser.

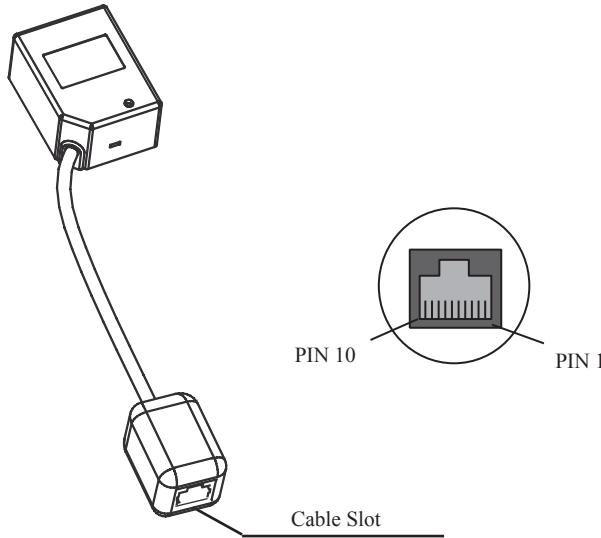

# Getting to Start

## Unpacking

### Data Interface

Pin	Function	Type	Name
1	NC		Null
2	NC		Null
3	VCC	P	Power DC5V
4	TXD	O	Serial Port Output, RS232
5	RXD	I	Serial Port Input, RS232
6	NC		Null
7	NC		Null
8	GND	P	Ground
9	D-	IO	USB Data Signal
10	D+	IO	

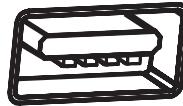

# Getting to Start

## Communication Ports

FM100 must connect to a Host to operate. A Host can be PC, POS, or any intelligent terminal with at least one of the following communication ports: USB, RS232, or PS/2.

1、USB

USB port on Host:

2、RS232

RS232 port on Host:

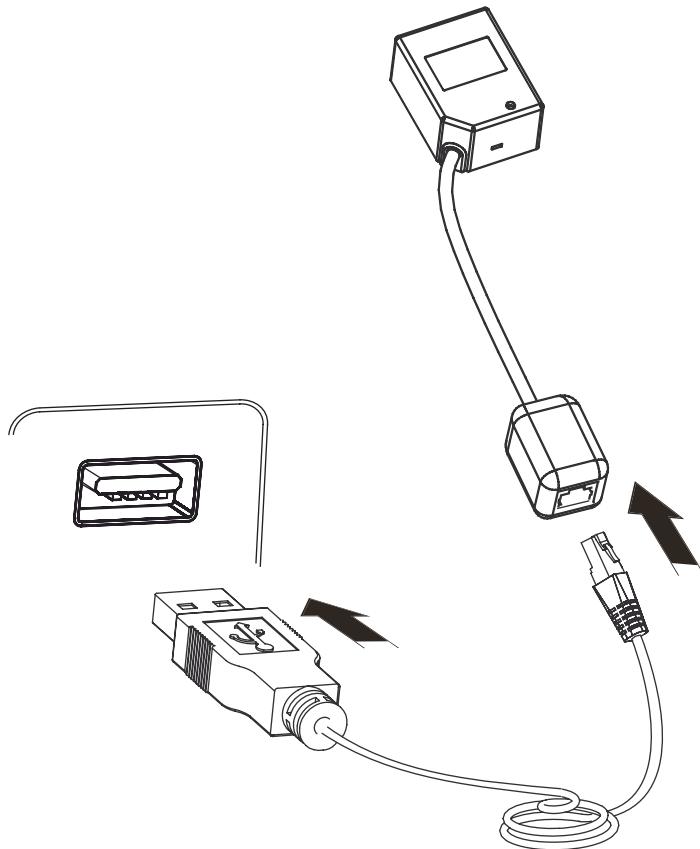

Please check the ports first to order the fitting cable.

## Getting to Start

### Connecting with USB Cable

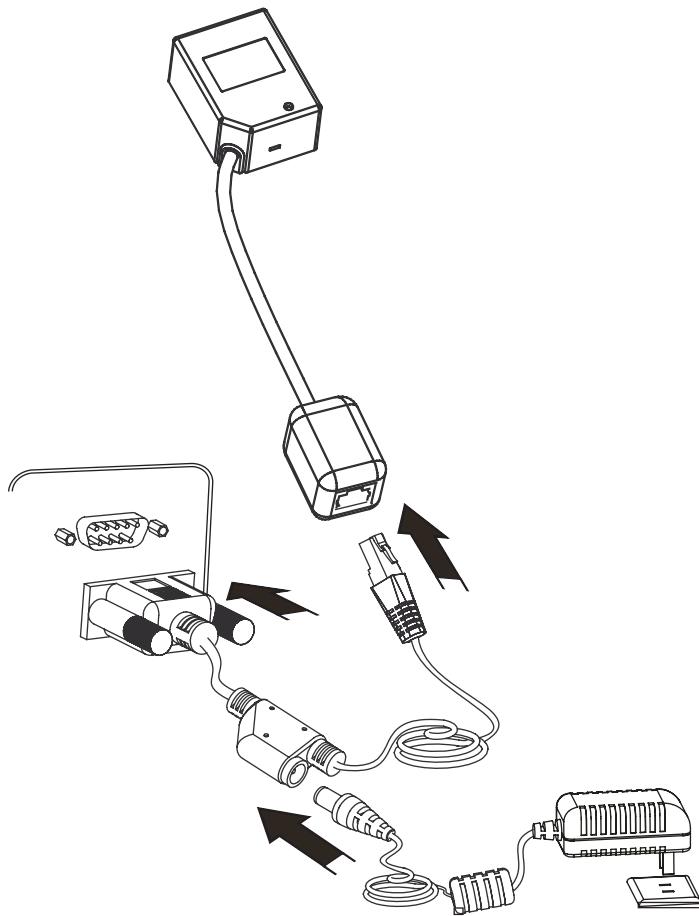

- 1、Insert USB Cable (RJ45 male head) into FM100 cable slot;
- 2、Insert USB Cable (USB male head) into Host's (female) USB connector;

## Getting to Start

### Connecting with RS232 Cable

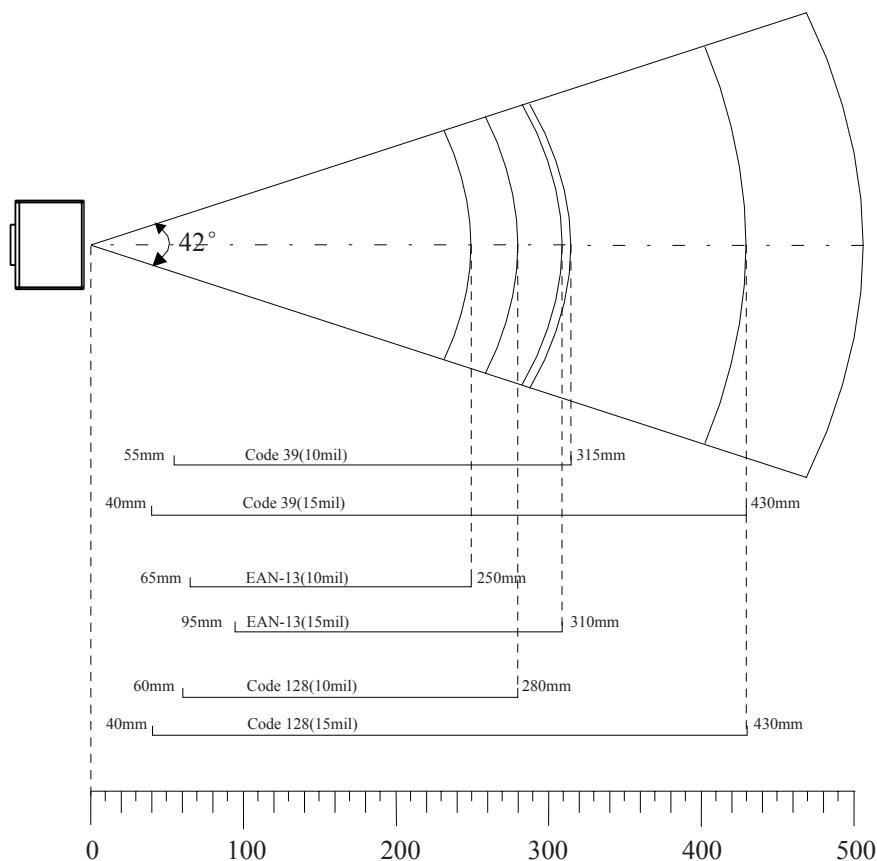

- 1、Insert RS232 cable (RJ45 male head) into FM100 cable slot;
- 2、Insert RS232 cable (RS232 male head) into Host's (female) RS232 connector;
- 3、Connect RS232 cable and the mains with power adapter;

# Getting to Start

## Specifications

### Performance

Interface	RS232, USB 1.1						
Image Sensor	CCD						
Resolving	2500						
Symbologies	Code128, EAN-13, EAN-8, Code39, UPC-A, UPC-E, Codabar, Interleaved 2 of 5, ISBN/ISSN, Code 93, UCC/EAN-128, GS1 Databar, etc.						
Precision	≥ 5mil (Condition:PCS=0.9, testing code: Code 39)						
Light Source	LED(622 nm - 628 nm)						
Light Intensity	265 LUX (130 mm )						
Depth of Scan Field	40mm-430mm						
Print Contrast Signal	≥ 30%						
Sensitivity**	<table border="0"> <tr> <td>Pitch</td> <td>±65° @ 0° Roll and 0° Skew</td> </tr> <tr> <td>Roll</td> <td>±30° @ 0° Pitch and 0° Skew</td> </tr> <tr> <td>Skew</td> <td>±60° @ 0° Roll and 0° Pitch</td> </tr> </table>	Pitch	±65° @ 0° Roll and 0° Skew	Roll	±30° @ 0° Pitch and 0° Skew	Skew	±60° @ 0° Roll and 0° Pitch
Pitch	±65° @ 0° Roll and 0° Skew						
Roll	±30° @ 0° Pitch and 0° Skew						
Skew	±60° @ 0° Roll and 0° Pitch						
Illumination	0 ~ 100,000 LUX						

### Mechanical/ Electrical

Power Consumption	1.25 W				
Voltage	DC 5 V				
Max	250mA				
Current	<table border="0"> <tr> <td>Working</td> <td>170mA</td> </tr> <tr> <td>Idle</td> <td>65mA</td> </tr> </table>	Working	170mA	Idle	65mA
Working	170mA				
Idle	65mA				
Dimensions	49.0*37.0*26.0 mm				
Weight	70g				

### Environment

Operate Temperature	-5° C - +45° C
Storage Temperature	-40° C - +60° C
Humidity	5% - 95% ( non-condensing )

### Certificates

FCC Part15 Class B, CE EMC Class B

\*\*Test Condition:

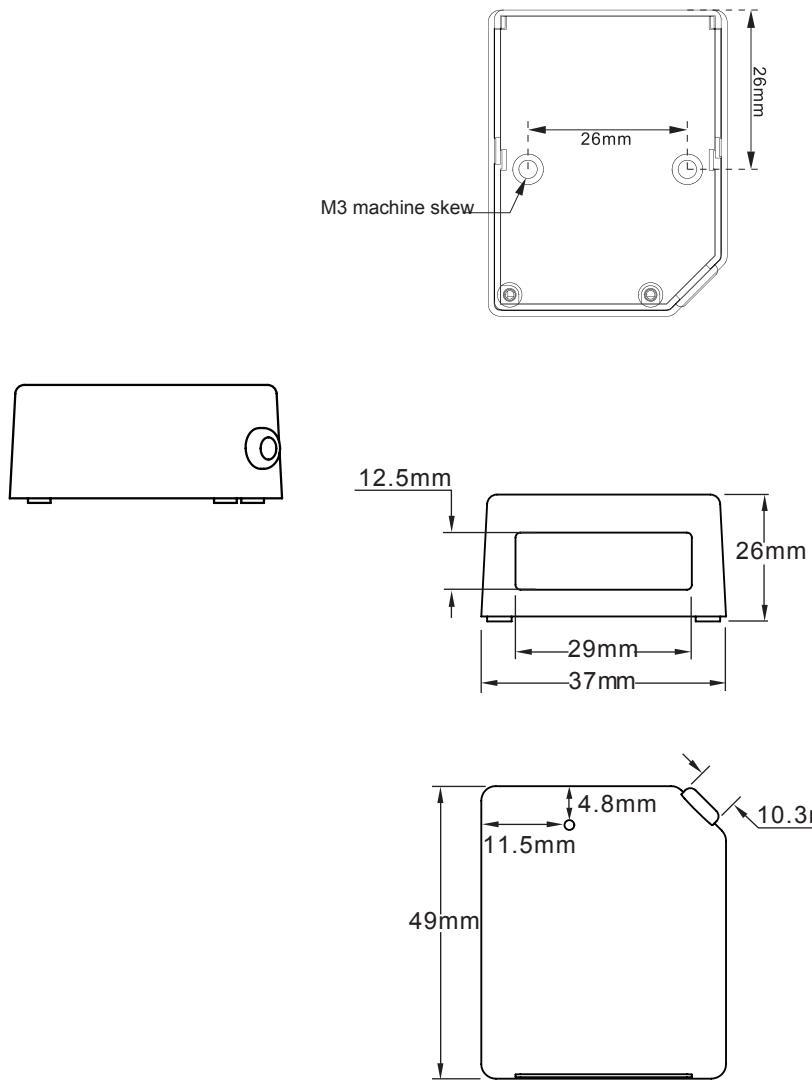

Code39: 3 Bytes ; Resolution = 10mil; W:N = 3:1 ; PCS = 0.8 ;  
Barcode Height = 11mm; Distance = 120mm; T=23° C; Illumination= 200 LUX

# Getting to Start

## Dimensions of FM100 Unit

# General Programming

---

## Introduction

There are 2 ways to program (configure) the Engine, Code Programming and Command Programming.

---

### Code Programming

The Engine reads a set of specially encoded barcodes to program options and features. In the following sections, we will explain the options and features available and provide the barcodes to program them.

This method of programming the Engine is most straight forward. However, it requires manually readings of each barcode. As all manual operations, errors are more likely to occur.

---

### Command Programming

The Host can send the Pro CMD strings to program the Engine. In the following sections, the Pro CMD strings will be included with the barcodes for Code Programming.

This method of programming the Engine could be automated. A software program can be developed to download all the configuration data to the Engine. The program can also verify the download.

Note: Except some temporary programming, the programming results are restored in non-volatile memory. They will not be lost when the Engine is powered off.

Code Programming ON

Code Programming OFF

This is the notation to disable the Code Programming.

There are 3 parts of a notation:

- 1、The barcode for Code Programming
- 2、The name of the options or features, such as Disable Code Programming.
- 3、The corresponding Pro CMD string of the Code Programming.

# General Programming

## Code Programming

Tools

Code Programming ON

Code Programming OFF

Read the “Code Programming ON” barcode to activate “Code Programming” function. More than one Code Programming barcodes can be read to configure the Engine.

If an option or feature needs additional parameters, such as digits, they can be found at the end of this chapter.

The value of code programming can be sent to the Host. For factory default, “No Send Pro Code Value”, the value of programming codes will not be sent to the Host; by reading “Send Pro Code Value”, the reader will send the value of Programming Code to the Host.

The factory default setting is “Code Programming ON”. Because it has low probability that a data barcode is the same as a programming barcode, it doesn’t need to close the function of Code Programming. Keeping it on won’t affect the daily using.

Some working parameters could be programmed. The data type of parameters is Dec or Hex and the numbers are also input through programming barcodes. The Appendix of the Integration Guide includes all needed data barcodes.

Programming barcodes are used to program the engine. For factory default, the reader will not send code value to the Host. But if needed, the engine could be programmed to "Send Pro Code Value". And whether the value is sent or not won’t affect the programming function. But "Send Pro Code Value" is a temporary setting. It will restore to "No Send Pro Code Value" when the engine is restarted or closed.

Code Programming ON

Code Programming OFF  
【Pro CMD: 99900032】

No Send Pro Code Value  
【Pro CMD: 99900033】

Send Pro Code Value  
【Pro CMD: 99900034】

# General Programming

## Command Programming

Commands under RS232 connection mean using 0x20-0x7D (the displayable characters) to express all commands information.

### 1、Configuration State

The engine should be in configuration state when programming functions under RS232 connection. In the state, the engine would only accept and execute the commands from communication and feed back.

Sending certain command to the engine will make it enter or quit the configuration state. Or if in configuration state the engine hasn't received new information for five seconds, the engine will quit the state automatically.

### 2、Express Regulation

- ①、Sending “\$\$\$\$” and receiving “@{@@” mean entering configuration state successfully.
- ②、Sending “%%%%” and receiving “^^^” mean quitting configuration state successfully.
- ③、Receiving “^^^” in configuration state means that the engine has quitted the state automatically.

④、In configuration state, every command begins with “#” and ends with “;” .E.g. “#99900030;”

⑤、 In configuration state, if the command is executed successfully, the Host will receive a command which begins with “!” and ends with “;” . E.g. “!99900030;” .

⑥、 In configuration state, if the command is invalid or executed unsuccessfully, the Host will receive a command which begins with “?” and ends with “;” . E.g. “?99976543;”

⑦、 In configuration state, if commands of query type are executed successfully, the host will receive “!xxxxxxxx; ” as well as the feedback which begins with “&{“ and ends with “|” . In the last nine characters in feedback, such as “|BF7974B7” , “|” is the separating character which separates the feedback information and check value. And other eight characters “BF7974B7” are CRC32’s Hex value and arranged from the highest position to the lowest. The feedback information is placed between “{“ and “|” . E.g.: Sending “#99900301;” and receiving “!99900301;&{Firmware v1.7.5;Decoder v1.00.023.C6;|FD25430B}”

If feedback information may have undisplayable characters, it will be expressed in hexadecimal notation. Two characters represent a character value. E.g.

“ & {AAA100423C5008001FF400001FF400001FF4000000040800000  
4080000040000000408000004080000408006FF400000040800000408000004080006FF  
F400006FF400006FF400004FF400004FF400002FF400004FF400004FF400004FF  
F400001FF400000000000000A7566746764E426863657271776C6F7669736261797A706D5-  
2000600000FEB2A2F4CC  
CFD390ADC8D38FF5E6D99DAA|E1DFA587} ”

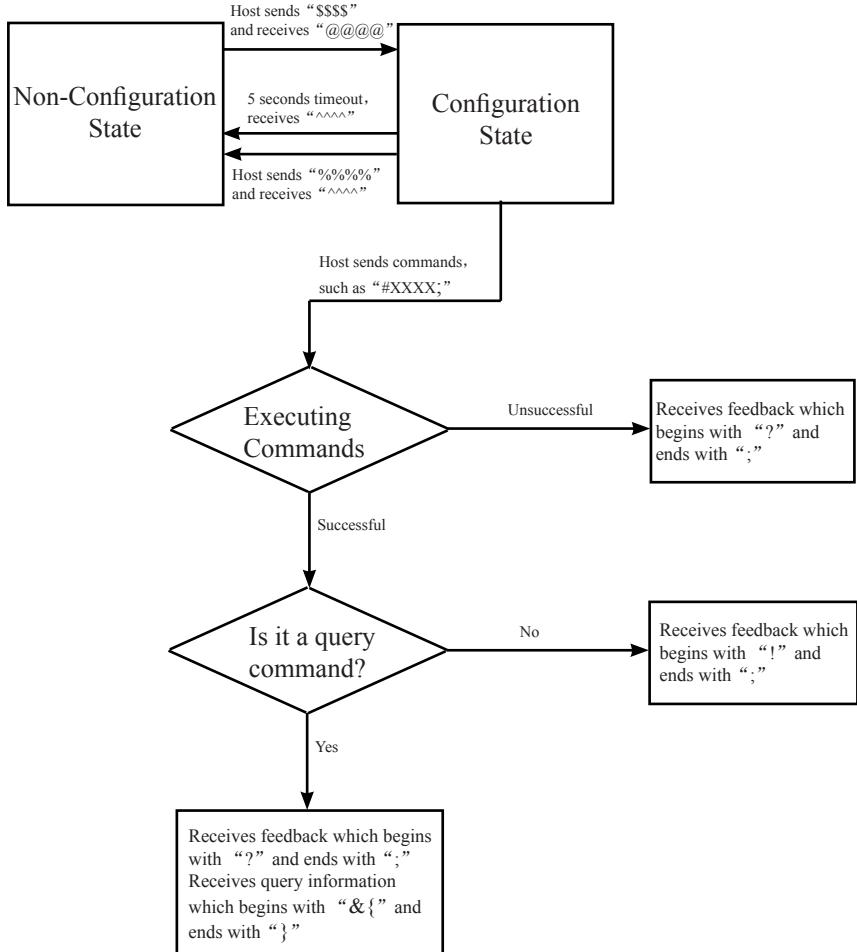

⑧、 In configuration state, if a command is with parameters, it will be composed following the rules which command system defined. For example, the command string which has 0x0D and 0x0A as ending character and be saved is “#99904112,#99900000,#99900015,#99900000,#99900012,#99900020;” .

# General Programming

## Command Programming

### 3、 Flow Chart

## General Programming

Default

Code Programming ON

Code Programming OFF

### Factory Default

Read “Load All Factory Default” to reset all parameters to factory default.

Applicable conditions:

- » User options programming wrong configuration leads to reading malfunction
- » Forget details of previous programming and start over.
- » Restore to default after unusual settings are not needed.

Load All Factory Default  
【Pro CMD: 99900030】

## General Programming

Reading Mode

Tools

Interval Mode

After programming, the engine will start interval scan without trigger. The interval between two scans is fixed whether the scan is successful or not. The value of interval could be programmed by user and the default value is 1s.

Code Programming ON

Code Programming OFF

Interval Mode

【Pro CMD: 99900112】

Reading a barcode time length

【Pro CMD: 99900150】

Interval Length

【Pro CMD: 99900151】

Interval takes 500ms as a unit and could be classed in fifteen levels:0-15. For instance, interval could be programmed to 5000ms:

- 1、Read “Code Programming ON”
- 2、Read “Interval Length”
- 3、Read numbers “1” “0”
- 4、Read “Code Programming OFF”

# General Programming

Reading Mode

Code Programming ON

Sensor Mode

After programming, the engine will start to sense the environment without trigger. After a scan, it will stop and keep sensing to wait another illumination changing. In sensor mode, a trigger also can start a scan. The sensitivity level could be chosen.

Sensor Mode  
【Pro CMD: 99900113】

In sensor mode, the engine could set Reading a barcode time length, and set interval length as sensing stabilization time.

Reading a barcode time length  
【Pro CMD: 99900150】

Interval Length  
【Pro CMD: 99900151】

Sensitivity is used to evaluate the engine's ability to sense the changing environment. Users can choose a sensitivity level which suits the environment.

High Sensitivity  
【Pro CMD: 99900152】

Low Sensitivity  
【Pro CMD: 99900154】

Medium Sensitivity  
【Pro CMD: 99900153】

User Sensitivity  
【Pro CMD: 99900161】

## Sensitivity Level Programming

There are sixteen levels of 0 to F. The lower the value is, the higher the sensitivity level is.

For instance, we could program sensitivity level as 5 level.

- 1、Read “Code Programming ON”
- 2、Read “User Sensitivity”
- 3、Read number “5”
- 4、Read “Code Programming OFF”

## General Programming

Reading Mode

Tools

Code Programming ON

Continuous Mode

Code Programming OFF

After programming, the engine will be in continuous mode without trigger. After a successful scan, the engine will be in waiting state until another scan, then wait again.

Continuous Mode  
【Pro CMD: 99900114】

In continuous mode, the engine could set Reading a barcode time length and interval length.

Reading a barcode time length  
【Pro CMD: 99900150】

Interval Length  
【Pro CMD: 99900151】

## General Programming

Reading Mode

Code Programming ON

Delayed Sensor Mode

After programming, the engine will start to sense the environment without trigger. There will be a delay before a scan. After a scan, it will stop and keep sensing to wait another illumination changing. In delayed sensor mode, a trigger also can start a scan. The sensitivity level could be chosen.

Delayed Sensor Mode  
【Pro CMD: 99900115】

In delayed sensor mode, the engine could set Reading a barcode time length and interval length.

Reading a barcode time length  
【Pro CMD: 99900150】

Interval Length  
【Pro CMD: 99900151】

In delayed sensor mode, reading a barcode time takes 2s as a unit and the range is from 0 to 30ms, 0 is infinite time; Interval takes 200ms as unit and the range is from 0 to 7.5s.

## General Programming

Reading Mode

Tools

Code Programming ON

Command Triggered Mode

Code Programming OFF

After programming, when FM100 receives trigger sweep command from terminal (e.g. PC) or read "Start Analog Trigger" barcode, the engine will start to work.

PS: If reading is successful, data will be returned and the engine wil stop working automatically. Or the engine will keep reading until receiving stop command or reading "Stop Analog Trigger".

When FM100 receives stop command from terminal (e.g. PC) or read "Stop Analog Trigger" barcode, the engine will stop. Meanwhile a 2 byte data(e.g. 0A;0X) must be returned.

Command Triggered Mode  
【Pro CMD: 99900116】

Start Analog Trigger  
【Pro CMD: 99900035】

Stop Analog Trigger  
【Pro CMD: 99900036】

If a reading is failed, the engine will send a character which means a reading failure. Users could set the character themselves.

Set Reading Failure Character  
【Pro CMD: 99904200】

## General Programming

Security Level

The higher the value of Security Level is, the lower the probability of mis-decoding and the decoding speed are. Otherwise, the speed is higher.

Code Programming ON

Code Programming OFF

Security Level 1  
【Pro CMD: 99900120】

Security Level 3

# Communication Programming

---

## Introduction

Under RS232 connection the engine and the Host use the same communication parameters: baud rate, parity check, data bits select and stop bits select.

# Communication Setup

Serial Port Programming

Tools

Code Programming ON

Baud Rate

Under RS232 connection, the engine and the Host should set communication baud rate to the same to keep normal communication.

Baud rate is the bits transmitted per second (8 bits per bytes). The engine and the Host must communicate at the same baud rate.

The reader supports baud rate as the following:

9600

# Data Format

## Introduction

1D barcodes could contain digits, letters and symbols, etc. 2D barcodes could contain more data, such as Chinese characters and other multi-byte characters. However, in reality, they do not and should not have enough information we need, such as barcode type, date and time of scan, delimiter, and so on, in order to keep the code short and flexible.

Prefix and Suffix are how to fulfill the needs mentioned above. They can be added, removed, and modified while the original barcode message is still in tact.

Barcode processing sequences: first add Prefix/Suffix, then terminate with Terminal and transmit.

## Data Format

Prefix Sequences

Tools

Code Programming ON

Code Programming OFF

CodeID+User Prefix+AIMID  
【Pro CMD: 99904010】

User Prefix+CodeID+AIMID  
【Pro CMD: 99904011】

## Data Format

User Prefix

### Disable or Enable User Prefix

User Prefix is added before barcode message. For example, if the user prefix is “AB” and the barcode message is “123”, the Host receives “AB123”.

Code Programming ON

Code Programming OFF

Disable User Prefix  
【Pro CMD: 99904020】

Enable User Prefix  
【Pro CMD: 99904021】

### Program User Prefix

Enable “Program User Prefix”. Then program user prefix byte(s). To end the prefix, read “Save programming”. The user prefix byte is programmed in its hex values.  
See example below.

Program User Prefix  
【Pro CMD: 99904022】

**E**  
*xample*

Program “CODE” as user prefix (The hex of “CODE” are 0x43/0x4F/0x44/0x45):

1. Read “Code Programming ON”
2. Read “Program User Prefix”
3. Read “4,3,4,F,4,4,4,5” in order
4. Read “Save”
5. Read “Code Programming OFF”

If User Prefix is enabled, after finishing the above configuration, “CODE” will be added before scanned data.

## Data Format

### AIM Prefix

Code Programming ON

Code Programming OFF

Disable AIM Prefix for All Barcodes  
【Pro CMD: 99904030】

Enable AIM Prefix for All Barcodes  
【Pro CMD: 99904031】

## Data Format

Code ID Prefix

Tools

Code Programming ON

Code Programming OFF

Besides AIM prefix, Code ID prefix can be used to denote barcode format and can be customized.

The Code ID prefix MUST be one (1) or two(2) visible English letters, capital or small, only.

No Code ID Prefix

【Pro CMD: 99904040】

Allow Code ID Prefix

【Pro CMD: 99904041】

Load Code ID Factory Default

【Pro CMD: 99904042】

## Data Format

User Suffix

Tools

Code Programming ON

Disable or Enable User Suffix

User suffix is appended to the right of barcode message. For example, if user suffix is “AB” , and the barcode message is “123” , The Host receives “123AB” .

Disable User Suffix

【Pro CMD: 99904100】

Enable User Suffix

【Pro CMD: 99904101】

---

Program User Suffix

Read “Program User Suffix” . Then program user suffix byte(s). To end the suffix, read “Save programming” . The user suffix byte is programmed in its hex values. See example below.

Program User Suffix

【Pro CMD: 99904102】

-----  
Program “AGE” as user suffix (The hex of “AGE” are0x41/0x47/0x45):

1. Read “Code Programming ON”
2. Read “Program User Suffix”
3. Read “4,1,4,7,4,5” in order
4. Read “Save”
5. Read “Code Programming OFF”

If User Suffix is enabled, after finishing the above configuration, “AGE” will be added after scanned data.

-----

**E  
xample**

## Data Format

Terminal

Code Programming ON

Disable or Enable Terminal

"Terminal" is the termination for a string of barcode messages. It is fixed to the right and the very end of a barcode transmission.

The major difference between "Terminal" and "User Suffix" is that the information and the decoded messages in user suffix could be formatted but couldn't in terminal.

Disable Terminal

【Pro CMD: 99904110】

Enable Terminal

【Pro CMD: 99904111】

## Program Terminal

Read "Program Terminal". Then program terminal byte(s). At last, read "Save programming". The terminal byte is programmed in its hex values. See example below.

You can also quickly set terminal to 0x0D or 0x0D,0x0A and enable it by scanning "Set Terminal as 0x0D and Enable Sending" or "Set Terminal as 0x0D,0x0A and Enable Sending".

Set Terminal as 0x0D and Enable Sending  
【Pro CMD: 99904113】

Program Terminal

【Pro CMD: 99904112】

Set Terminal as 0x0D,0x0A and Enable Sending  
【Pro CMD: 99904114】

-----  
Program 0x0A (line feed) as terminal

1. Read "Code Programming ON"
2. Read "Program Terminal"
3. Read "0" "A"
4. Read "Save"
5. Read "Code Programming OFF"

If Terminal is enabled, after finishing the above configuration an LF character will be added after scanned data.

**E**xample

# Symbols

---

## Introduction

Each type of barcode has its unique attribute. With the programming code, the engine will adjust to the changes of these attributes. Disabling reading of the symbols which do not apply will improve reading performance.

## Symbols

Code 128

Code Programming ON

Load Factory Default

Load Code 128 Factory Default

Example of setting Code 128 Code ID to “p” (0x70)

1. Read Enable Code Programming barcode.
2. Read Code 128 Code ID Setting barcode.
3. Read Following Barcodes: “7”, and “0”
4. Read Save barcode
5. Read Disable Code Programming barcode.

## Symbols

Code 128

### Select Message Length

It is used to program the valid reading length of Code 128. The engine will send an error beep, if the decoded data length does not match the valid length.

Code 128 Message Length is defined by “Min. Message Length” and “Max. Message Length” .

Code Programming ON

Code Programming OFF

Min Message Length

【Pro CMD: 99910003】

Max Message Length

【Pro CMD: 99910004】

-----  
1D bar code Message Length should not exceed 255 bytes. If Max Message Length is less than Min Message Length, it means the engine will only support barcodes of the two lengths. If Max Message Length is equal to Min Message Length, the engine will only support barcodes of the length.  
-----

## Example

To set Min Message Length of Code 128 to 8 bytes and Max Message Length to 12 bytes, read these programming codes

- 1、 “Code Programming ON”
- 2、 “Select Min Message Length”
- 3、 Digit Code “8” , see Digit Code
- 4、 “Save Programming” , see Digit Code
- 5、 “Select Max Message Length”
- 6、 Digit Code “1”
- 7、 Digit Code “2”

2. Read Interleaved 2 of 5 Code ID Setting barcode.
3. Read Following Barcodes: “7”, and “0”
4. Read Save barcode
5. Read Disable Code Programming barcode.

## Symbols

Interleaved 2 of 5

Code Programming ON

### Check Digit

Interleaved 2 of 5 may include Check Digit (not compulsory) following its barcode messages. If included, it could be the last digit. It verifies the barcode message.

» “NO Check, Transmit All” means to read without check and transmit all bytes including barcode message and Check digit.

» “Check, Do Not Transmit Check Digit” means to read and check. If verification is successful, transmit barcode message; if not, engine sends an error beep.

» “Check, Transmit All” means to read and check. If verification is successful, transmit all messages; if not, engine sends an error beep.

“NO Check, Transmit All”  
【Pro CMD: 99911203】

Check, Do Not Transmit Check Digit  
【Pro CMD: 99911204】

Check, Transmit All  
【Pro CMD: 99911205】

When “Check, Do Not Transmit Check digit” is enabled and barcode message length minus one is less than Min Message Length, it will lead to error beep.  
E.g.: Reading a 4-byte (include check Digit) Interleaved 2 of 5 with the Min Message Length being 4 bytes and “Check, Do Not Transmit Check digit” enabled leads to error beep.

## Symbols

Interleaved 2 of 5

Code Programming ON

Select Message Length

It is used to program the valid reading length of Interleaved 2 of 5. The engine will send an error beep, if the decoded data length does not match the valid length.

Interleaved 2 of 5 Message Length is defined by “Min. Message Length” and “Max. Message Length”

Min Message Length  
【Pro CMD: 99911206】

Max Message Length  
【Pro CMD: 99911207】

-----  
1D bar code Message Length should not exceed 255 bytes. If Max Message Length is less than Min Message Length, it means the engine will only support barcodes of the two lengths. If Max Message Length is equal to Min Message Length, the engine will only support barcodes of the length.  
-----

## Example

To set Min Message Length of Interleaved 2 of 5 as 8 bytes, and Max Message length as 12 bytes, read these programming codes:

1. “Code Programming ON”
2. “Select Min Message Length”
3. Digit Code “8”, see Digit Code Appendix (Pxxx)
4. “Save Programming”, see Digit Code Appendix (Pxxx)
5. “Select Max Message Length”
6. Digit Code “1”
7. Digit Code “2”
8. “Save Programming”
9. “Code Programming OFF”

### Save and Abort

Code Programming ON

Code Programming OFF

In order to save the received data “Save” has to be read after data transition completed. If error occurs when reading data, the wrong data can be deleted and the setting up can be done again..

Eg, after a program code is received then ‘1 2 3’ in order is received, if then read “Abort One Data of Current Setting” the ‘3’ will be deleted; if read “Abort One String of Current Setting” the ‘123’ will be deleted; if read “Abort Current Setting” both the program code and ‘123’ will be deleted, the device will be on status of “initiating program code”.

Save
